mdt.finance — Manual and Standard Operating Procedures

Nov 10, 2026 · @Maarten

1. Overview

mdt.finance is MDT's private share register and shareholder portal: admins record every Class A share movement, valuation and dividend, and each shareholder sees only their own holdings, cash and returns. It replaces the Google Sheets share tracker as the single source of truth.

Who uses it

Role	Who	What they do
Shareholder	Employees and outside investors who hold shares, or companies through a contact person	Sign in, view shares, value, returns, cash and dividends, sign the shareholder agreement
Admin	Maarten (as Van Ruitenburg Holdings Ltd.) and anyone made an admin	Everything in the admin console; every action is recorded under their name
Counsel, accountant	No login	Receive exports and documents from an admin

Addresses

Site	Address	Use
Live (production)	https://mdt.finance	Real data. The only site shareholders should use
Test (staging)	https://staging.mdt.finance	Made-up data for trying features; never enter real data here

Key ideas

- **The ledger.** Every share movement is one entry from one holder to another, with a date, share count, price per share and the amount actually paid. Holdings are always added up from the ledger; nobody types a balance.
- **Nothing is deleted.** A mistake is fixed by **reversing** the entry (a mirror-image correction) and entering it again. Reversed pairs cancel out on every date and are hidden by default.
- **VRH.** Van Ruitenburg Holdings Ltd. is a normal holder. Maarten signs in as VRH.
- **Issued by MDT.** The source of newly issued shares (shown in People as *Opening balance (pre-system)*). Its balance is always minus the total shares issued, e.g. −100,078. It is never zero.
- **Two-decimal shares.** Quantities are exact to 0.01 of a share (e.g. 75,106.22).
- **Estimate vs locked price.** The latest year's price shows to shareholders as an estimate ("not yet audited") until an admin locks it after the audit.
- **Cash balance.** Money MDT holds for a shareholder: dividends not yet paid out, kept toward a future purchase.

Glossary

Term	Meaning
Cost basis (Invested)	What a holder paid for the shares they still hold (average cost)
Value	Shares × the latest price
Annualized return	Yearly rate earned, counting purchases, sales, every dividend (paid or kept) and today's value, like Excel's XIRR
Record date	The day whose holdings decide who gets a dividend
Declaration date	The day a dividend is declared; it counts as income on this date
Correction	The entry that reverses a mistaken entry
Audit log	The permanent record of every change: who, what, when, before and after

2. Access and sign-in

Nobody can sign up on their own: every account starts from a one-time invite link an admin creates, and every account must use two-step sign-in.

First sign-in (shareholder)

1. Open the invite link (works once, expires after 72 hours).
2. Choose a password of at least 12 characters.
3. Set up an authenticator app (Google Authenticator, Microsoft Authenticator, 1Password, etc.): scan the QR code, or type the key shown under *Can't scan?*.
4. Save the backup codes somewhere safe. Each works once if the phone is lost.
5. Enter the 6-digit code to finish. The dashboard opens.

Every later sign-in: email + password, then a fresh 6-digit code from the app.

Admins also need a passkey (Face ID, Touch ID, Windows Hello or a security key). The first time an admin opens **Admin**, they add one; after that the admin console only opens on a passkey sign-in. Passkeys are tied to the site address: a passkey for mdt.finance does not work on staging.mdt.finance and vice versa.

Session limits

Limit	Value
Signed out after inactivity (shareholders)	30 minutes
Signed out after inactivity (admin console)	15 minutes
Longest session, active or not	12 hours

Lost access

Situation	Fix
Shareholder forgot password, still has the authenticator app	Admin opens their person page → **Create password-reset link** and sends it.
Shareholder lost their phone but has backup codes	Sign in with password, use a backup code instead of the 6-digit code.
Shareholder lost phone and codes	Ask the system maintainer to run account recovery for them (section 11).

Situation	Fix
An admin is locked out	Another admin can send a reset link; if no admin can sign in, use account recovery (section 11).

If a link shows *This link has expired*, it was already used or is older than 72 hours: create a new one.

3. Shareholder guide

A shareholder's dashboard shows only their own record, computed live from the ledger; this is the text to share with shareholders when they first sign in.

Summary figures

Figure	What it means
Shares held	Shares owned today, to two decimals
Price per share	Latest price. Reads "2026 estimate, not yet audited" until that year is locked; then "2026 valuation"
Current value	Shares held × price per share
Invested	What was paid for the shares still held (average cost)
Value gain	Current value − invested, in $ and %
Dividends earned	Every dividend ever received, paid out or kept
Cash balance	Money MDT holds for them (e.g. dividends kept toward a future purchase)
Annualized return	Yearly rate including purchases, sales, dividends and today's value. Shown after the first year of ownership
Total return	Value gain + dividends earned

Sections further down

- **Cash balance card**: what the cash is made of (dividends earned, paid out, kept, used for purchases).
- **Dividends**: every dividend with its date, shares on the record date, amount, and *Paid out [date]* or *Kept as cash*.
- **How your investment is doing**: value vs. invested at each annual valuation (appears after the second valuation). Hover or tap a point for details; *Show as table* lists the numbers.
- **Price per share by year**: each year's price, with the holder's own purchases marked.
- **Share history**: every purchase or sale with date, shares, price and amount paid. Counterparties are never shown.

Signing the shareholder agreement

1. When an admin sends it, an *Action needed: sign your shareholder agreement* card appears at the top.
2. Download the agreement and read it.
3. Sign it (digitally or on paper) and save the signed copy as a PDF; a phone scan is fine.
4. Upload the signed PDF in the same card. It shows *with MDT for review* until an admin confirms it, then *Signed on [date]* with a link to the copy.

Companies. Shares held through a company (e.g. 1076844 BC Ltd.) are shown to the company's contact person, who signs in with their own email; the dashboard greets them by name and notes the company holding the shares.

4. Admin console reference

The admin console (**Admin** at the top right, passkey required) has ten screens; every change on any of them is written to the audit log under the admin's name.

Screen	What it's for
People	Everyone on record: type, status, hire date, portal account, agreement status, shares held. Click a name to open their person page

Screen	What it's for
Person page	Edit details (name, type, email, contact person, hire date, status) · **Shares**: full history, **Add / Remove shares**, **Reverse** · shareholder agreement · masked SIN and banking (each reveal is logged) · invite or password-reset link · **Make admin / Remove admin**
Import	Add or update people from a CSV file or rows pasted from a spreadsheet (`name, email, hire_date, status, type, contact_name`). Template download. Preview before saving
Import share history	Record many share movements at once (`date, from, to, shares, price_per_share, amount, note`). All rows are recorded or none
Buy / sell	Record one sale between any two holders, including sales by and buybacks to VRH. Recent sales list with **Reverse**
Valuations	One card per year from 2020: EBITDA, debt, multiple, total shares → price per share. **Save draft**, **Lock**
Dividends	Declare (calculated or per-person amounts), mark paid, keep as cash, download payout CSV, void
Agreements	Upload shareholder agreement versions and choose the current one
VRH & opening balances	VRH's balance, record an opening balance, list of opening balances, **Start over**
Settings	Program rules: total shares outstanding, multiple, min/max purchase, eligibility and hold-rule years. Changes are dated; history kept
Audit log	Every change and sensitive read, newest first, filterable by table

Holder names used on screens and in imports

Name	Means
Issued by MDT / pre-portal	Newly issued shares, or shares held before the portal
VRH, Van Ruitenburg Holdings	Van Ruitenburg Holdings Ltd.
A company's contact person (e.g. Nathan Neels)	Matched to the company in imports (e.g. 1076844 BC Ltd.)

5. SOP 1: Onboarding a new shareholder

A new shareholder is fully onboarded when they have a person record, their shares on the ledger, a confirmed signed agreement, and an active portal login.

When: a new employee or investor buys in, or an existing holder is given portal access for the first time. **Who:** an admin.

1. **Create the person.** Admin → People → open them if they already exist; otherwise Admin → Import, paste one row, Preview, Import. Use type `company` with a `contact_name` for a holding company.
2. **Check the details.** On their person page → *Edit details*: name, email (needed for the invite), hire date (sets eligibility), status. Save.
3. **Record their shares.** Person page → Shares → *Add shares*: From = the seller (VRH, another holder, or *Issued by MDT* for new shares), shares, price per share, total paid if different from shares × price, date of the transaction. See SOP 2.
4. **Send the agreement.** Person page → Shareholder agreement → *Send agreement to sign* (the current version from Admin → Agreements). See SOP 5.
5. **Invite them.** Person page → Portal access → *Create invite link* → *Copy link*. Send it by email with the address https://mdt.finance and a note that they'll need an authenticator app.
6. **Confirm the agreement** when their signed copy comes back (person page shows *Needs review*). See SOP 5.
7. **Check.** People list shows *Active* under Account and *Signed [date]* under Agreement; their share count matches your records.

Done when: the person's portal shows the right shares, value and history, and the agreement shows *Signed on [date]*.

Notes

- Never invite people to staging.mdt.finance for real use; it has made-up data.
- An invite link works once and expires after 72 hours. Create a new one if needed; old unused links stay valid until they expire.
- To give someone admin rights, see SOP 6.

6. SOP 2: Recording share movements and fixing mistakes

Every change in ownership is one ledger entry from a seller to a buyer, dated the day it happened; payment itself happens outside the system.

Which kind of movement

Situation	From	To	Where to enter it
MDT issues new shares	Issued by MDT	The new holder	Person page → Add shares, or Import share history
VRH sells to someone	VRH	The buyer	Buy / sell, or the buyer's person page
A holder sells to another holder	The seller	The buyer	Buy / sell
VRH buys back (e.g. departure)	The holder	VRH	Buy / sell, or the holder's person page → Remove shares
Shares held before the portal	Issued by MDT / pre-portal	The holder	VRH & opening balances, or Import share history

Recording one movement

1. Admin → Buy / sell (or the person page → Add / Remove shares).
2. Choose seller and buyer.
3. Enter shares (up to two decimals), price per share, and **Total paid** when the amount actually paid differs from shares × price (e.g. $25,000.00 for 26.05 shares at $959.72). Leave it blank otherwise.
4. Enter the **date it actually happened**, not today's date. Returns and dividends depend on it.
5. Add a note (e.g. "Option agreement exercise 2026") and save.

6. Check both holders' share counts on the People list.

The system refuses a sale larger than the seller's balance.

Recording many past movements: Admin → Import → Import share history. Upload or paste rows with `date, from, to, shares, price_per_share, amount, note` (dates as YYYY-MM-DD). The preview flags unknown names; rows are recorded oldest first, all or none.

Fixing a mistake

1. Open the person page of either holder involved.
2. Click **Reverse** on the wrong entry. Both holders go back to how they were before it.
3. Enter the movement again with the right details.

Reversed entries and their corrections cancel out on every date and are hidden; *Show N reversed* on the person page brings them back. To move a rounding difference (e.g. 0.01 of a share) between two holders, record a 0.01 movement at price 0, total 0, with a note.

Starting over (rare)

Admin → VRH & opening balances → Start over, type `REVERSE ALL`. Every share movement is reversed and every holder returns to zero; people, valuations, agreements, dividends and cash are untouched. Then re-import the full history. Afterwards, open each past dividend and act on any *Check this dividend* warning (SOP 4).

Checks after any batch of changes

- *Opening balance (pre-system)* equals minus the total shares issued (−100,078 for Class A today).
- Each holder's count matches the share register.

7. SOP 3: Annual valuation

Each year's price per share = (multiple × audited EBITDA − debt) ÷ total shares outstanding, rounded down to the cent; it is entered as a draft, shown to shareholders as an estimate, and locked once audited and board-approved.

Lifecycle of a year's price

Stage	What shareholders see	Can it change?
Draft (latest year)	The price, labelled "[year] estimate, not yet audited"	Yes
Draft (an older year)	Nothing	Yes
Locked	The price, labelled "[year] valuation"	No, permanently

Entering or updating an estimate (any time, e.g. a mid-year forecast)

1. Admin → Valuations → the year's card.
2. Enter EBITDA and debt in dollars. Multiple and total shares are pre-filled from Settings; change them only if that year was different.
3. Check the price shown at the top right of the card.
4. **Save draft**. If it's the latest year, the card says *Draft: shareholders see this as an estimate* and dashboards update immediately.

Locking after the audit (once a year, after audited financials, typically April)

1. Get the audited EBITDA and debt and the board's approval of the price.
2. Enter the audited figures in the year's card and **Save changes**; confirm the price matches what the board approved.
3. Click **Lock** and confirm. The label changes to "[year] valuation" for everyone.
4. Record in the board minutes the price and the date it was locked; the card shows who locked it and when.

Rules

- Lock only figures that are audited and approved: a locked year can never be edited, even by an admin.
- The denominator is total shares outstanding (100,078 Class A today). Update it in Settings when share counts change (SOP 6).
- Value, returns and charts on every dashboard use the latest year's price, estimate or locked.

Past years: enter each year from 2020 the same way and lock it once its audited figures are confirmed (the tracker's audited 2024 price is $959.72).

8. SOP 4: Dividends

Declaring a dividend adds each shareholder's amount to their cash balance; marking it paid takes it back out when MDT actually pays; anyone not marked paid keeps it as cash toward a future purchase.

Declaring a new dividend

1. Admin → Dividends → Declare a dividend.
2. Choose **Total to pay out** (e.g. 25,000.00) or **Amount per share** (e.g. 0.35).
3. Set the **record date** (holdings at the end of that day decide who gets what) and the **declaration date**.
4. **Calculate**. Every holder on the record date is listed, VRH included, with their exact amount in whole cents; totals add up exactly.
5. Check the list, then **Declare**.

Paying it

1. Download the **payout file (CSV)** from the dividend's page for whoever sends the payments.
2. After the payments go out, on the dividend's page tick everyone who was paid, set **Date paid**, click **Mark N as paid**.
3. Leave unticked anyone keeping theirs as cash; their amount stays in their cash balance. Mark them paid later if they change their mind.

Recording a past dividend

1. Admin → Valuations → *Declare a [year] dividend*, or Admin → Dividends.
2. Enter the total and the real record and declaration dates; **Calculate**.
3. Change any amount to what was actually paid; edited rows show *edited (was …)* and the total updates as you type.
4. Use **Add someone who isn't listed** for anyone paid who doesn't show as a holder that day; set **0** to leave someone out.
5. Tick **Already paid out on** and enter the payment date.
6. **Declare**. The dividend notes that amounts were entered per person.

Record share history before past dividends: the calculation uses the ledger as of the record date.

Fixing a wrong dividend: open it → *Entered this wrong? Void the dividend* → reason, type `VOID`. Every amount it added, and any payouts, is reversed; then declare it again. A voided dividend stays listed, struck through.

Check this dividend warning: shown when a calculated dividend's share counts no longer match the ledger on its record date (e.g. history corrected afterwards). If the amounts still match what was paid, leave it; if not, void and re-declare.

How dividends count

- In **annualized return** and **dividends earned**: on the declaration date, whether paid out or kept.
- In **cash balance**: only until marked paid.
- Voided dividends count nowhere.

9. SOP 5: Shareholder agreements

Agreements are signed by download and upload: the shareholder downloads the current version, signs it digitally or on paper, and uploads the signed PDF; an admin checks it and confirms it.

Uploading a new version

1. Admin → Agreements → **Upload a version**.
2. Give it a version name (e.g. *v1 — March 2027*) and choose the PDF (up to 10 MB).
3. The newest upload becomes **Current**. Earlier versions stay listed and downloadable; agreements already signed are not affected.

Sending it to a shareholder

1. Admin → People → the person → *Shareholder agreement* → **Send agreement to sign**.
2. Their dashboard shows *Action needed: sign your shareholder agreement*, with the download and an upload box.
3. While waiting, the section reads *Sent, waiting for their signed copy*. **Withdraw request** cancels it.

Reviewing a returned copy

1. The person shows *Signed copy returned, needs your review*.
2. **Open their signed copy** and check every page is signed, dated and complete.
3. Set the **Date signed**.

4. If it's fine: **Confirm signed agreement**. If not: write what to fix and **Send back to fix**; they see your note and upload again.

Signed on paper or elsewhere

On the person's page use *Signed on paper or elsewhere? Upload the signed copy*: choose the PDF, set the date signed, **Save signed agreement**. No review step is needed.

When a new version must be re-signed: upload it, then on each person's page use **Send the current agreement to sign again**. The older signed copy stays in their history.

New shareholders: send the agreement as part of onboarding (SOP 1), before recording their first purchase where possible.

Agreement PDFs are stored in the database itself and can't be deleted. Sending, uploading, confirming and sending back are all in the audit log; opening or downloading a file is not.

10. SOP 6: People changes

All changes to a person are made on Admin → People → their page. Every change is recorded in the audit log.

Editing details

1. **Edit details**: full name, email, hire date, type (Employee, Outside investor, Company with a contact person) and status.
2. **Save details**.
3. Changing someone's email after they've signed in changes where invites and resets go, not their existing login. If they can't sign in afterwards, send a password-reset link.

Statuses

Status	Use for	Effect
Active	Current employees	Normal
On leave	Leave of absence	Informational only
Departed	Left the company	No new invites or reset links; not offered as a buyer on Transfers. Their shares and any existing login stay.

When someone leaves

1. Set status to **Departed**.
2. If MDT or VRH buys their shares back, record it on Admin → Transfers as a sale to VRH at the agreed price (SOP 2), with the date the money changed hands.
3. Pay out any cash balance. Dividend cash is paid by ticking their line on each dividend's page (SOP 4); there is no screen yet for one-off payouts of other cash.
4. Keep their record: nothing about a person is ever deleted.

Buyback rules (forced sales on quitting, retiring and so on) are not automated yet; the transfer is entered by hand.

Company holders

A company (e.g. a holding company) is a holder in its own right; its **Contact person (signs in)** and **Contact's email** get the login. Invite links go to the contact. To change contact, edit the details and send the new contact an invite.

Sensitive details (SIN and banking)

Shown masked. Clicking reveal shows the full value and writes an audit-log entry under your name. Only reveal when you need it (e.g. setting up a payment), and enter new values in the same section.

Admin access

1. **Make admin** or **Remove admin** on their page. You can't change your own role.
2. A new admin must set up a passkey the next time they sign in.
3. Keep at least two admins so one can recover the other.

Invites and resets

- **Create invite link** for someone with no login yet; **Create password-reset link** for someone locked out.
- **Copy link** and send it directly. Links expire; create a new one if it's too late.

Program settings

Admin → Settings holds the program rules: minimum and maximum purchase, eligibility years, minimum ownership and service years before selling, and total shares outstanding (the price denominator, 100,078 today). Type the new value and save; it applies from that moment. **Earlier values** lists what each setting was before and who changed it. Update *total shares outstanding* as soon as MDT issues or cancels Class A shares, before the next valuation is locked.

11. Environments, deployment and recovery

Everything runs on Railway in one project with two environments; both deploy the `main` branch of the GitHub repo.

	Production	Staging
Address	mdt.finance	staging.mdt.finance
Data	Real shareholders	Sample data and test accounts
Who uses it	Shareholders and admins	Admins trying things out, testers
Logins	Separate	Separate: a staging account doesn't work in production

Each environment has its own app service and Postgres database (which also holds the agreement PDFs). Nothing is shared between them.

How a change goes live

1. A change is merged to `main` on GitHub.
2. Railway builds it and runs the pre-deploy step (`npm run release`): database migrations, and on staging the sample data.
3. If that succeeds and the health check on `/` passes, the new version replaces the old one with no downtime. If it fails, the old version keeps running.

Check a deploy in Railway → the environment → app service → **Deployments**; **Deploy Logs** show the pre-deploy output.

Variables that must never be lost

Variable	Why
`FIELD_ENCRYPTION_KEY`	Encrypts SIN and banking. **If lost, every SIN and bank detail is unreadable.** Keep a copy in a password manager or safe, separate from Railway.
`BETTER_AUTH_SECRET`	Signs logins. Changing it signs everyone out.
Database passwords	Rotating them needs the matching `DATABASE_URL` changes (see the README).

Backups

Everything, including the agreement PDFs, is in the production Postgres database, so its backups are the backup. Check in Railway (Postgres service → **Backups**) that scheduled backups are switched on for production; restore from there if needed. A backup is useless without `FIELD_ENCRYPTION_KEY` for the SIN and banking fields.

Sign-in rules

- Everyone uses a password plus a second step: an authenticator app code, a backup code or a passkey.
- Admins must use a passkey to open the admin console.
- Sessions end after 30 minutes without activity.
- Invite links expire after 72 hours.

SOP: someone is locked out

They forgot their password but have their authenticator or passkey: an admin uses **Create password-reset link** on their page and sends it.

They lost their authenticator, backup codes and passkey (including an admin locked out of the console):

1. Railway → the right environment → app service → **Variables**.
2. Add `RECOVER_ACCOUNT` = `their-email:any-new-code` (code at least 6 characters, never reused, e.g. `name@mdttac.com:recover-2026-11-10`).
3. Deploy the change (Railway prompts you to).
4. In **Deploy Logs** find the line *account recovery* with a reset link. Their two-step sign-in, passkeys and sessions are cleared.

5. Send them the link privately. They set a new password and set up two-step sign-in again; admins also add a new passkey.
6. **Delete the `RECOVER_ACCOUNT` variable.** Each code only works once, but leaving it there is untidy and confusing.

Only someone with access to the Railway project can do this; keep that access to the owner and one backup person.

Audit log

Admin → Audit shows every change: who, when, what table, and the before and after values. It can't be edited or deleted. Use it to answer "who changed this" and as the record for the accountant.

12. Troubleshooting and FAQ

The problems below have all come up already; each has a known fix.

Problem	Likely cause	What to do
The site doesn't load ("can't find server")	Your computer or router has an old DNS answer	Try on phone data. On Windows run `ipconfig /flushdns` in a Command Prompt opened **as administrator**; restart the router; or set DNS to 1.1.1.1.
Invite or reset link says it expired	Links last 72 hours	Create a new link on their page and send it straight away. A link stops working once used.
A shareholder sees sample data or names they don't know	They're signed in to **staging**, not mdt.finance	Send them to https://mdt.finance and their production invite.
An admin can't open the admin console	The console requires a passkey	Sign in with the passkey (password manager or device). No passkey on this device: set one up when prompted. Lost all: SOP in section 11.

Problem	Likely cause	What to do
Passkey isn't offered by the password manager	The passkey was saved for the other environment (staging vs production)	Passkeys are per address; set one up on each site you use.
A holder's shares or chart look doubled	An entry was reversed and re-entered	Fixed in the app: reversed pairs are ignored on every date. If it reappears, check the person's history for two live copies of the same entry and reverse one.
The system holder (*Issued by MDT / pre-portal*) isn't at minus the total issued	Someone's opening shares came from the wrong holder, or a typo	Compare each person to the source sheet; correct with Reverse plus a new entry (SOP 2).
Totals are off by 0.01	Rounding in the source spreadsheet	Record the exact two-decimal figure agreed for each person.
Check this dividend warning	Share history changed after the dividend was calculated	SOP 4.
A shareholder's price says *estimate*	The latest year isn't locked yet	Expected. Lock the year when the valuation is final (SOP 3).
A deploy failed	Usually a migration or a variable	Railway → Deployments → Deploy Logs. The previous version keeps running meanwhile.

FAQ

Can I delete a wrong share entry? No. Use **Reverse** and enter it again correctly. Both stay visible, and the pair cancels out everywhere.

Can I start the share history over? Yes: Admin → VRH & opening balances → **Start over** reverses every live entry. Use it only before shareholders rely on the numbers; it is in the audit log.

Why is Maarten's holding under Van Ruitenburg Holdings Ltd.? VRH is the holder; Maarten is its contact and signs in for it.

Do dividends kept as cash count in the return? Yes, from the declaration date, exactly like dividends paid out.

How is the annualized return calculated? XIRR: every purchase is money in, every sale and dividend is money out, and today's holding at the current price is the final value.

Can a shareholder see other people's holdings? No. The database itself only returns their own records, whatever the screen asks for.

Can staging and production get mixed up? No data moves between them. Only the code is shared.

13. Controls, rules and what's not built yet

The portal enforces its own controls; a few parts of the program are still handled by hand, and some decisions are open with counsel.

Built-in controls

Control	What it means for you
Append-only ledgers	Share and cash entries can't be edited or deleted. Mistakes are fixed with a reversing entry; both stay visible.
Every holding is a record	Shares always move from one holder to another, including from *Issued by MDT / pre-portal* and VRH. Holdings are always the sum of the ledger, never typed in.
Exact numbers	Money is kept in whole cents and shares in hundredths. No rounding drift.
Row-level security	The database itself only lets a shareholder read their own records.
Two-step sign-in	Required for everyone; passkey required for admins; 30-minute idle timeout.
Encrypted SIN and banking	Masked by default; every reveal is in the audit log.
Audit log	Every change and every sensitive read; can't be edited.

Control	What it means for you
Settings, not code	Program rules (limits, years, shares outstanding) are changed on the Settings page, with history.
Separate staging	Testing happens on staging with sample data; real data stays in production.

Done by hand today

Task	How
Emails to shareholders	The portal sends no email. Copy invite and reset links and send them yourself.
Signatures	Download, sign, upload (SOP 5). There's no e-signature service connected.
Annual buy/sell window and order matching	Agree sales outside the portal, then record each on Buy / sell (SOP 2).
Departure buybacks	Record as a sale to VRH (SOP 6).
Cash payouts other than dividends, payroll savings	Not on screen yet.
Statements, T5 slips, lawyer package	Prepare outside the portal from the payout CSV and holder data.
Backups	Railway's Postgres backups; check they're on and test a restore once.

Not built yet (later phases)

- Annual cycle: eligibility engine, purchase window, buy and sell orders, payment confirmation, matching and July 1 settlement.
- Departures: buyback queue and the 10-year / 5-year hold rule.
- Year-end: December 31 package and annual statements.
- Share classes other than Class A.
- Email notifications and login alerts.
- PIPA privacy notice at onboarding and a stated retention period.

Open decisions (from the brief)

These affect later phases; close them with counsel and the accountant before the first July 1 cycle.

- Buyback price and timing, and whether firing for cause changes the price.
- Valuation formula details: total or net debt; whether the share count includes every class.
- Whether the $10,000 cap is per person per year or per order.
- Unfilled sell requests: pro rata with carry-forward, or VRH buys the excess.
- Outside investors and the departure buyback; which securities exemption applies.
- US and Ireland staff eligibility, and whether service at Lone Peak or Leading Edge counts.
- Payroll savings: trust account, interest, refunds on leaving.
- The 10-year / 5-year rule details.
- Dividend tax: T5 slips and non-resident withholding.

When a decision closes, update SPEC.md in the repo and this manual.
